

French designer & manufacturer
of luminous decorations since 1958

GROUPE LCX
— Expert in Lighting —

50 years of innovation

For 50 years, Leblanc Illuminations® has symbolised the best in festive lighting. Founded in 1958, the company has made its mark on the history of street decorations and illuminations and still today, its creations remain the most captivating.

In 1958, Michel leblanc, owner of Leblanc Illuminations®, was the first in Europe to produce illuminated motifs on wood frames fitted with porcelain lamp holders. In 1960, illuminated motifs were built on aluminium frames for the first time. This new process allowed a greater diversity of creation, increased longevity and an excellent size/weight ratio. Anticipating the need for energy savings as soon as in 1996, Leblanc Illuminations® introduced leD (light-emitting Diode) technology into its ranges. In 2005, Leblanc Illuminations® created for the first time a new program based on synchronization of the motifs, for which the patent was registered. Since then many cities have used this innovating system, which remains exclusive. In 2006, the company also offers interactive animations, in which the viewer becomes an actor of the show. Then in 2008, Leblanc Illuminations® enters a new era by presenting a video-decor of 4 m by 1 m.

Tailor-made projects

The LCX Group® occupies a dominant position in the design, the manufacture and the distribution of luminous decorations and festive lighting items for cities.

Leblanc Illuminations® is constantly seeking to serve your needs as best as possible with new lines, new materials and new technologies. To support you in carrying out your boldest projects, Leblanc Illuminations® offers a full, constantly changing range of festive decorations. All the products are designed so that they are easy to set up and handle.

Leblanc illuminations® is committed to protecting the environment

The decorations designed by Leblanc Illuminations® can be recycled up to 95%. A special attention is paid to the recycling of the materials and components used in the conception and the production of the decorations, in order to minimize the impact on the environment.

In addition to internal awareness-raising activities and the use of LED products since 1998, Leblanc Illuminations is launching a reforestation programme developed by EcoAct. In 2008, this initiative enabled the LCX Group® to plant 4500 trees in France and in Brazil. Thanks to this programme, illuminations are still associated with festivities, but are also synonymous with solidarity and respect of the environment.

Groupe LCX®, a single point of contact for all your decorative lighting projects
